Effetti sanitari a breve e lungo termine conseguenti all'esposizione ad IPA nella popolazione residente a Roma

Massimo Stafoggia e Giulia Cesaroni

Roma, 11 giugno 2014

BACKGROUND

- **Strong evidence on the health effects of air pollution,** especially on cardiovascular and respiratory systems
- Long-term exposure to air pollution has been related to **cancer incidence**
- Last October, **IARC classified air pollution,** and in particular fine particles, **as carcinogenic to humans**
- Association between **long-term exposure to PAH** and health outcomes **less clear**
- **No evidence on the short-term health effects of PAH**

OBJECTIVES

- To estimate population exposure to fine particles (**PM_{2.5}**), total polycyclic aromatic hydrocarbons (**PAHs**), and benzo[a]pyrene (**BaP**), and to investigate their association with mortality and morbidity in Rome, Italy, in terms of:
 - **Short-term effects**
 - **Long-term effects**

SHORT-TERM

DATA

PM_{2.5}:

- Daily exposure estimates at 1-km resolution ("case-base")
- Daily average exposure from ARPA monitoring stations in the city

PAHs and BaP:

- Daily exposure estimates at 1-km resolution ("case-base")
- Daily exposures estimates with data assimilation ("assimilated")

Other confounders: daily mean temperature, holidays, influenza epidemics, day of the week, long-term/seasonal time trends

Mortality data: individual data with info on:

- Age and gender
- Cause of death
- Season (cold, warm)
- Place of death (home, in-hospital)

ROME
June 2011 – May 2012

Hospitalization data: individual data with info on:

- Age and gender
- Primary discharge diagnosis
- Season (cold, warm)

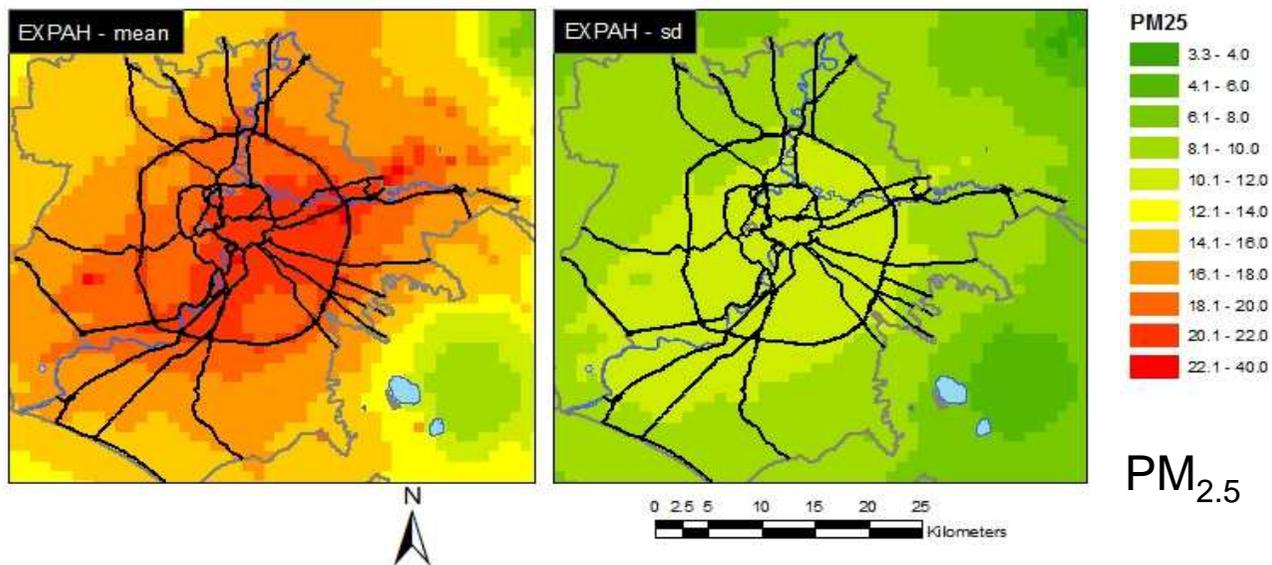

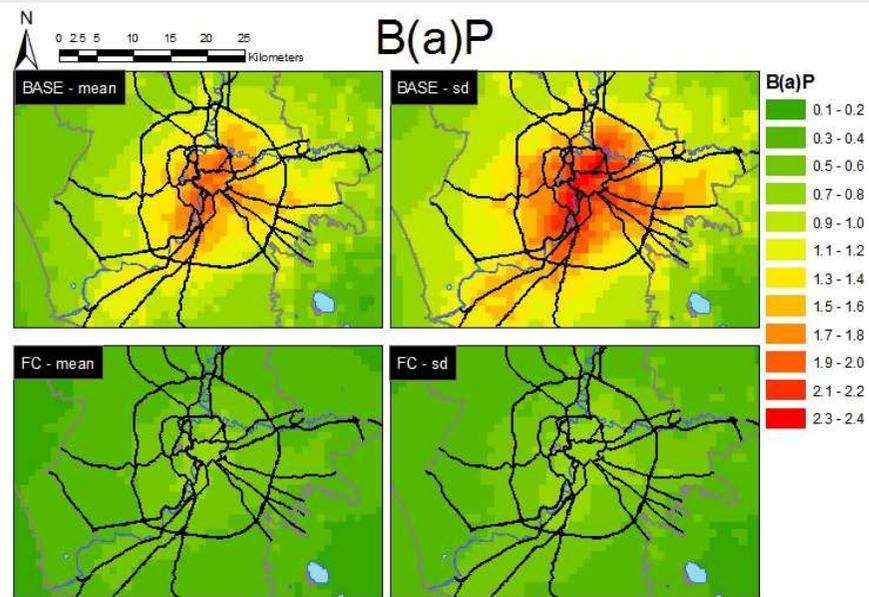

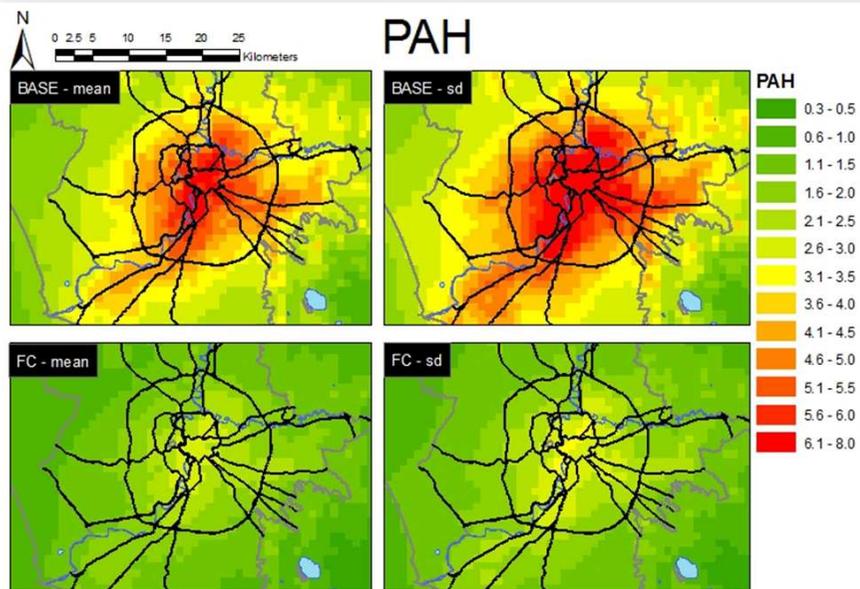

METHODS

- **Case-crossover approach:** exposure on “case” day (day of death/admission) compared with average exposure on control days (same days of the weeks within the month)
- **Additional adjustment** for time-dependent confounders
- 3 lag intervals a priori defined to represent immediate, delayed or prolonged effects: **lag 0-1, lag 2-5 and lag 0-5**
- **Effect modification by age, gender, season, and place of death** (for mortality only)
- **Concentration-response function**
- All results expressed as **% increase of mortality/hospitalization relative to increments of pollutants equal to its interquartile range (IQR)**, on the distribution of differences between case-day exposure and control-days exposures

RESULTS: Exposures (1)

RESULTS: Exposures (2)

| Variables | Mortality (N. 22,172) | | | Hospitalizations (N. 39,682) | | |
|----------------------------|--------------------------|-------|-------|---------------------------------|-------|-------|
| | Mean | SD | IQR | Mean | SD | IQR |
| PAHs | | | | | | |
| Base-case | 5.47 | 6.23 | 8.08 | 5.35 | 6.14 | 7.76 |
| Assimilated | 2.38 | 2.56 | 3.55 | 2.32 | 2.51 | 3.35 |
| BaP | | | | | | |
| Base-case | 1.62 | 1.90 | 2.48 | 1.59 | 1.87 | 2.38 |
| Assimilated | 0.59 | 0.64 | 0.89 | 0.57 | 0.63 | 0.84 |
| PM_{2.5} | | | | | | |
| Base-case | 20.65 | 11.29 | 14.26 | 20.52 | 11.36 | 14.03 |
| ARPA stations ¹ | 20.32 | 10.77 | 13.50 | 20.24 | 10.84 | 13.50 |
| Air temperature | 15.50 | 7.30 | 11.88 | 15.45 | 7.13 | 11.38 |

- Higher values (and more variability) in "case-base" as compared to "assimilated" series of PAHs and BaP
- Spatio-temporal PM_{2.5} series ("case-base") has similar distribution to temporal-only series ("ARPA stations")

- Very high correlations among all exposures, whatever the estimation method

| Variables | | PAH base | PAH assimil. | BaP base | BaP assimil. | PM2.5 base | PM2.5 ARPA | Temp. Airport |
|-------------|-----------------|----------|--------------|----------|--------------|------------|------------|---------------|
| PAH | Base-case | 1.00 | | | | | | |
| PAH | Assimilated | 0.95 | 1.00 | | | | | |
| BaP | Base-case | 1.00 | 0.95 | 1.00 | | | | |
| BaP | Assimilated | 0.92 | 1.00 | 0.92 | 1.00 | | | |
| PM2.5 | Base-case | 0.74 | 0.75 | 0.74 | 0.74 | 1.00 | | |
| PM2.5 | ARPA stations | 0.64 | 0.64 | 0.64 | 0.63 | 0.95 | 1.00 | |
| Temperature | Airport monitor | -0.70 | -0.71 | -0.71 | -0.72 | -0.48 | -0.37 | 1.00 |

RESULTS: Health data

| Variables | No. | % |
|-----------------------------------|---------------|--------------|
| Deaths from natural causes | 22,172 | 100.0 |
| Causes of death (ICD-9 code) | | |
| Cardiovascular | 8,204 | 37.0 |
| Cardiac | 6,265 | 28.3 |
| Cerebrovascular | 1,628 | 7.3 |
| Respiratory | 1,508 | 6.8 |
| Age (years) | | |
| 0-34 | 164 | 0.7 |
| 35-64 | 2,445 | 11.0 |
| 65-74 | 3,525 | 15.9 |
| 75-84 | 7,256 | 32.7 |
| 85+ | 8,782 | 39.6 |
| Gender | | |
| Men | 10,489 | 47.3 |
| Women | 11,683 | 52.7 |
| Season of death | | |
| Cold (October-March) | 12,104 | 54.6 |
| Warm (April-September) | 10,068 | 45.4 |
| Place of death | | |
| Home | 7,556 | 34.1 |
| In hospital | 13,468 | 60.7 |
| Other or missing | 1,148 | 5.2 |

| Variables | No. | % |
|--|---------------|--------------|
| Cardio-respiratory hospitalizations | 39,682 | 100.0 |
| Primary diagnosis (ICD-9 code) | | |
| Cardiovascular | 27,287 | 68.8 |
| Ischemic heart disease | 6,774 | 17.1 |
| Heart failure | 5,235 | 13.2 |
| Cerebrovascular | 6,430 | 16.2 |
| Respiratory | 12,395 | 31.2 |
| COPD | 816 | 2.1 |
| Asthma | 286 | 0.7 |

RESULTS: Effects on mortality

| Mortality | Natural | | | Cardiac | | | Cerebrovascular | | | Respiratory | | |
|--|-------------|--------|------|---------|--------|------|-----------------|--------|-------|--------------|--------|-------|
| | % IR | 95% CI | | % IR | 95% CI | | % IR | 95% CI | | % IR | 95% CI | |
| PAH, base-case (IQR=1.61) (lag 2-5) | 2.39 | 0.45 | 4.37 | 1.82 | -1.51 | 5.27 | -0.24 | -6.88 | 6.88 | 2.99 | -4.39 | 10.94 |
| PAH, assimilated (IQR=0.65) (lag 2-5) | 2.03 | 0.47 | 3.60 | 1.58 | -1.09 | 4.32 | -0.45 | -5.77 | 5.18 | 2.76 | -3.22 | 9.10 |
| BaP, base-case (IQR=0.47) | 2.38 | 0.50 | 4.29 | 1.88 | -1.35 | 5.22 | -0.08 | -6.52 | 6.81 | 2.80 | -4.36 | 10.51 |
| BaP,assimilated (IQR=0.17) | 1.91 | 0.36 | 3.48 | 1.69 | -1.00 | 4.46 | -0.53 | -5.81 | 5.06 | 2.65 | -3.31 | 8.97 |
| PM2.5, base-case (IQR=13.08) (lag 0-5) | 1.02 | -3.60 | 5.87 | -1.59 | -9.50 | 7.00 | 4.45 | -11.76 | 23.64 | 14.36 | -5.25 | 38.02 |
| PM2.5, ARPA (IQR=14.00) (lag 0-5) | 1.52 | -3.41 | 6.71 | -0.84 | -9.49 | 8.63 | 7.04 | -10.78 | 28.41 | 14.98 | -5.79 | 40.33 |

- Clear effects of all exposures on **natural and respiratory mortality**
- **No main differences between the methods** for exposure estimate
- **No association with hospital admissions**

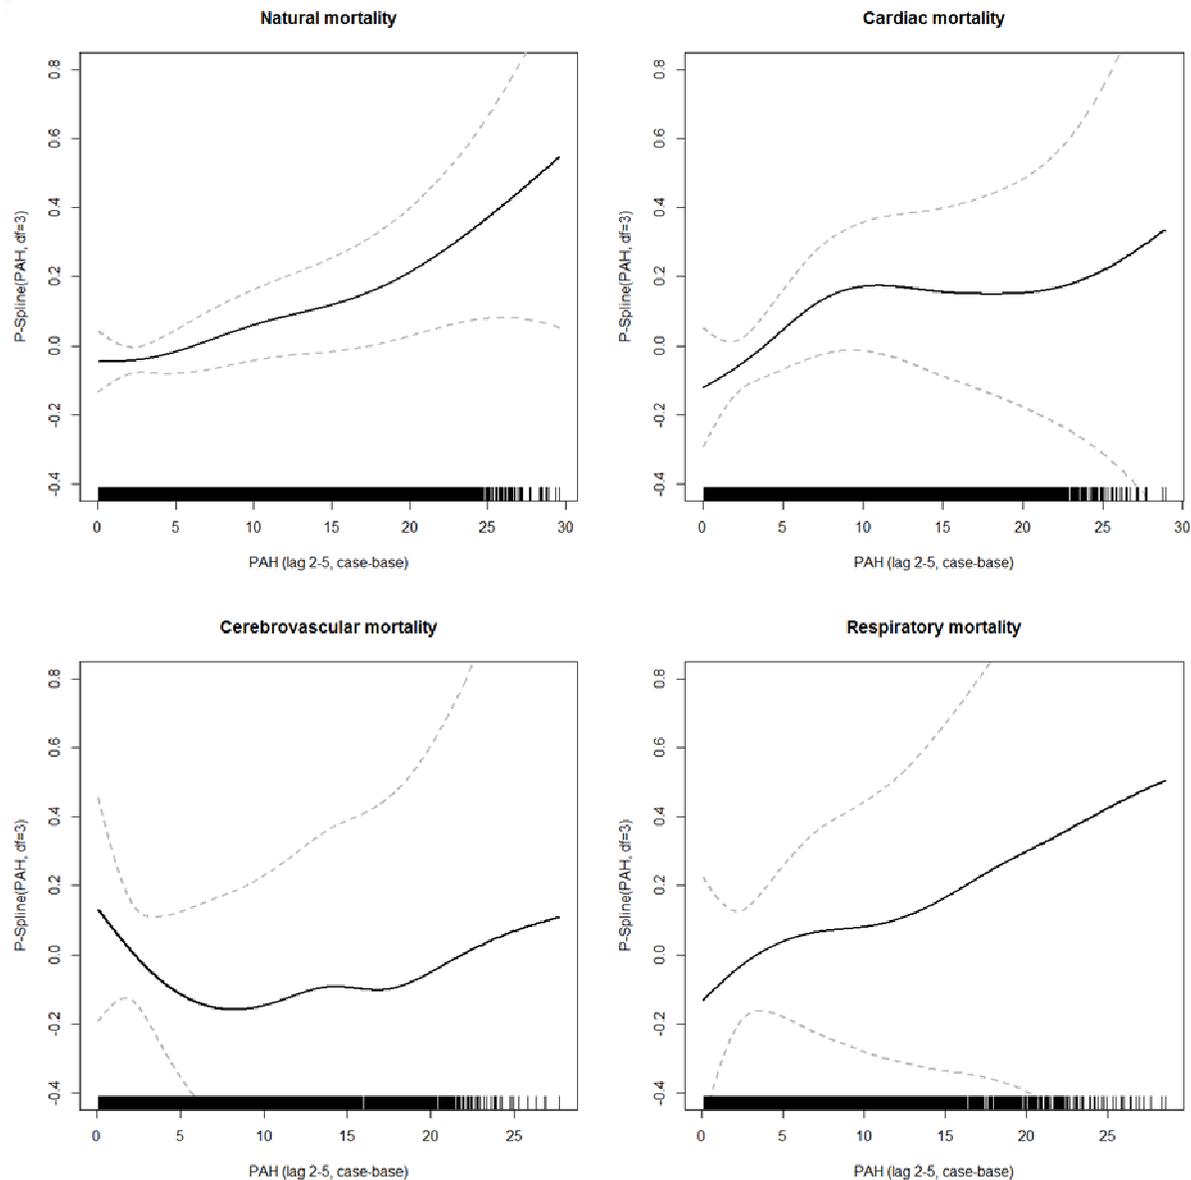

RESULTS: Effect modification

| Natural mortality and PAHs (lag 2-5) | Effects per 1.61 ng/m ³ | | | |
|--------------------------------------|------------------------------------|---------------|------------------|-------|
| | % IR | 95% CI | P _{int} | |
| Overall | 2.39 | 0.45 | 4.37 | - |
| Age | | | | |
| 0-64 | 3.39 | -0.93 | 7.89 | - |
| 65-84 | 1.16 | -1.24 | 3.62 | 0.345 |
| 85+ | 3.55 | 0.98 | 6.19 | 0.946 |
| Gender | | | | |
| Males | 2.14 | -0.28 | 4.63 | - |
| Females | 2.62 | 0.27 | 5.02 | 0.741 |
| Season of death | | | | |
| Cold (October-March) | 3.04 | 1.05 | 5.07 | - |
| Warm (April-September) | -16.50 | -26.48 | -5.16 | 0.001 |
| Place of death | | | | |
| Home | 2.17 | -0.53 | 4.93 | - |
| In hospital | 2.71 | 0.46 | 5.00 | 0.722 |
| Other or missing | -0.04 | -6.58 | 6.96 | 0.542 |

- **Elderly display highest risks** of dying from PAH exposure
- **No difference based on gender or place of death**; unclear results on season

RESULTS: Concentration-response (1)

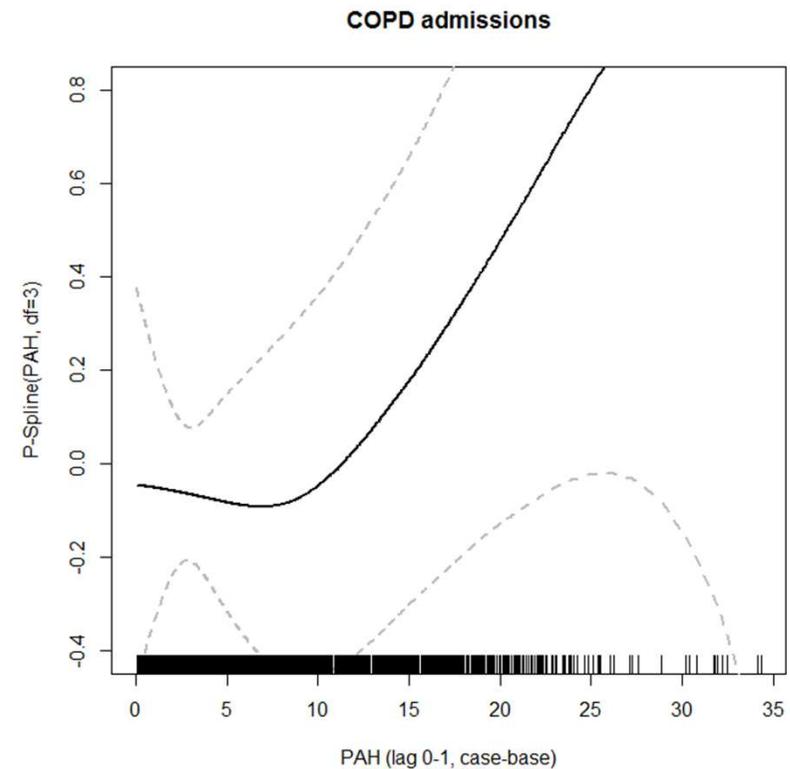

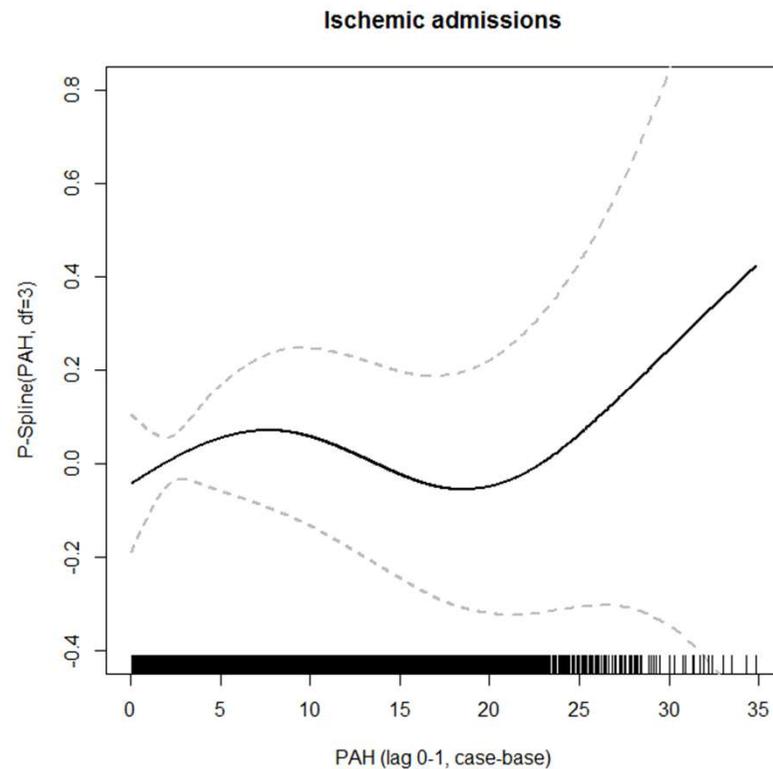

MORTALITY

- Evidence of increasing linear association of PAH with natural and respiratory mortality
- Less clear shape for cardiovascular causes

RESULTS: Concentration-response (2)

HOSPITALIZATIONS

- Some evidence of increasing more-than-linear association with ischemic and COPD admissions, but with poor statistical power

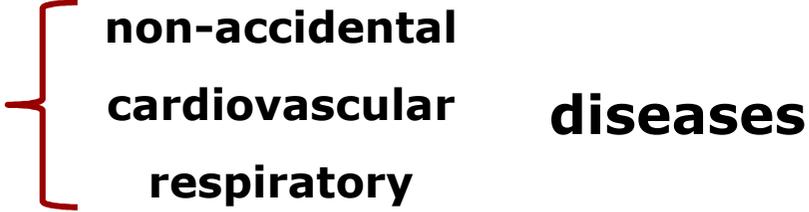

LONG-TERM

OBJECTIVES

- To estimate population exposure to fine particles (**PM_{2.5}**), total polycyclic aromatic hydrocarbons (**PAHs**), and benzo[a]pyrene (**BaP**), and to investigate their association with mortality and morbidity in Rome, Italy, in terms of:

- **Mortality**  **non-accidental
cardiovascular
respiratory diseases**
- **Incidence of acute coronary events**
- **Incidence of stroke**
- **Incidence of lung cancer**

METHODS - The data

- The Rome Longitudinal Study (>2ml)
- Census based cohort
- Residents in Rome are followed from October 2001 to 2012
- Information on socio-demographic factors, contextual factors
- Vital status and residential history (Municipal Registry)
- Hospital discharges
- The study is part of the National Statistical Programme

METHODS

- Subjects who were living in Rome on the 1 January 2008
- Aged 40 years or more
- Exclusion of 0.06% subjects with non unique identifier in the information health system
- 1996-2007 prevalent cases of acute coronary event, stroke and malignant tumor (hospital discharges and exemption tickets)
- Incident cases 2008-2012
- Exposure at baseline address

METHODS

- Acute coronary events

discharges ICD-9-CM: 410-411, mortality ICD-9: 410-414

- Stroke

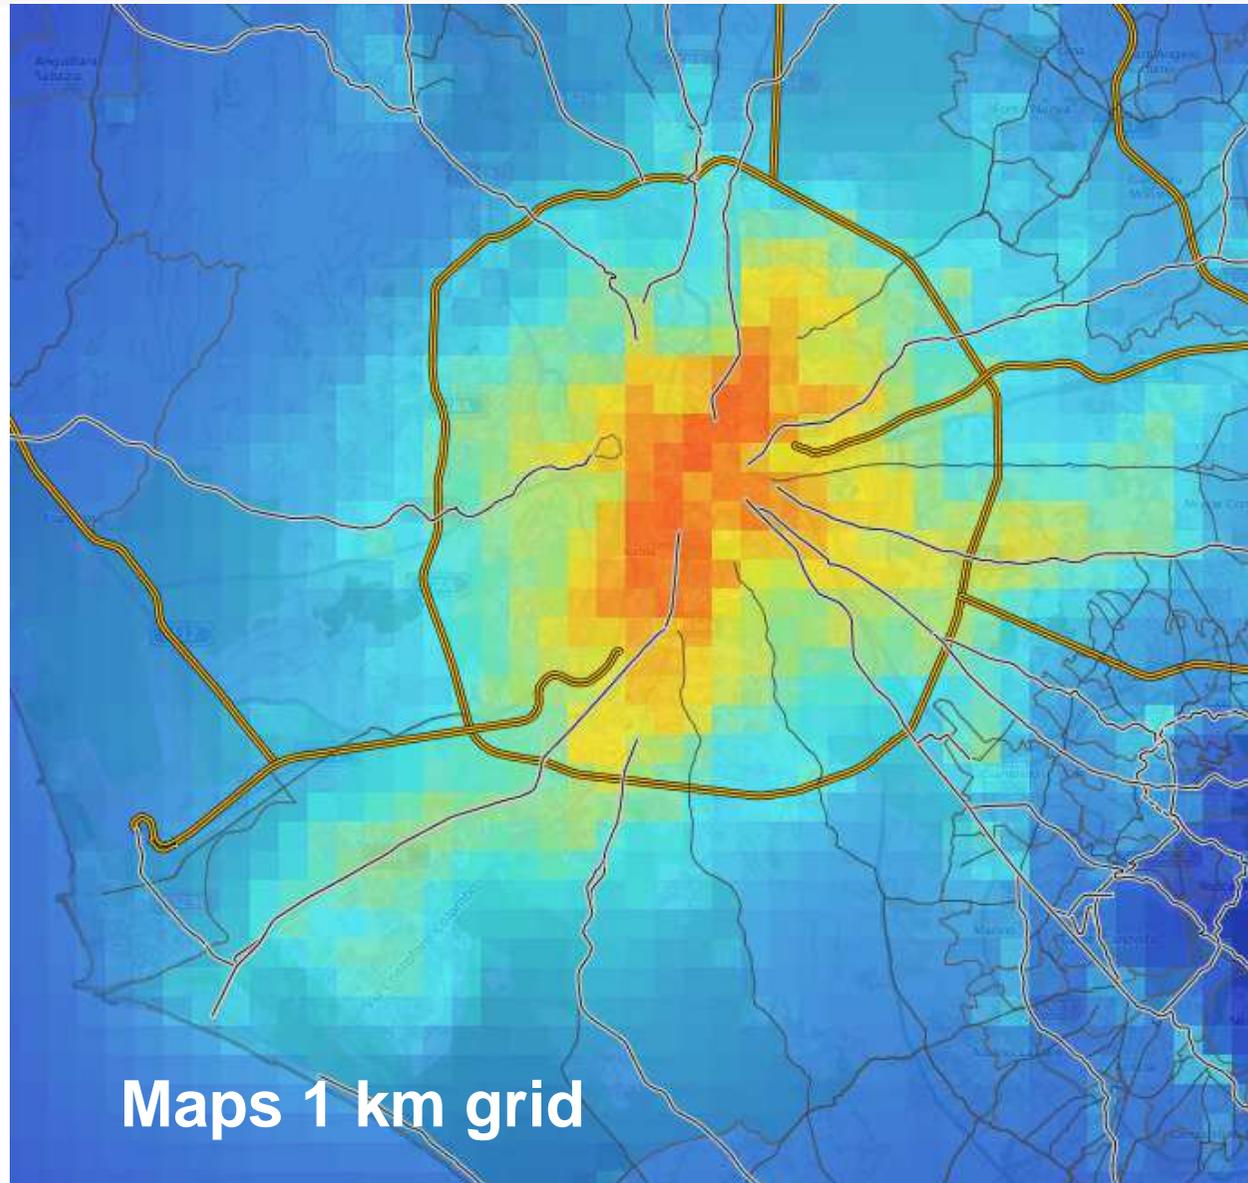

discharges ICD-9-CM:431,433.x1,434,436, mortality 431-436

- Lung cancer ICD-9 162

Cox proportional hazard models to evaluate the association between exposure and outcomes adjusting for individual and contextual factors.

METHODS - Exposure assessment - PAHs

RESULTS

Table 1. Descriptive statistics of environmental variables in Rome population

| Variables | No. Subjects | Mean | SD | Percentiles | | | | | | | IQR |
|-----------|--------------|-------|------|-------------|-----------------|------------------|------------------|------------------|------------------|-------|------|
| | | | | min | 5 th | 25 th | 50 th | 75 th | 95 th | max | |
| PAH | 1,013,886 | 2.15 | 0.39 | 0.52 | 1.40 | 1.91 | 2.23 | 2.43 | 2.70 | 2.76 | 0.52 |
| BaP | 1,013,886 | 0.53 | 0.10 | 0.13 | 0.35 | 0.47 | 0.55 | 0.60 | 0.67 | 0.68 | 0.13 |
| PM2.5 | 1,013,886 | 19.94 | 1.48 | 13.37 | 16.69 | 19.23 | 20.32 | 21.07 | 21.57 | 22.84 | 1.84 |

Models based on measurements taken from 01/06/2011 to 31/05/2012

Table 2. Correlations between pollutants

| | PAHs | BaP | PM2.5 |
|-------|------|------|-------|
| PAHs | 1.00 | | |
| BaP | 1.00 | 1.00 | |
| PM2.5 | 0.84 | 0.85 | 1.00 |

□

RESULTS

Table 3. Description of the study population and exposure

| | N | PAHs (Mean, sd) | | BaP (Mean, sd) | | PM2.5 (Mean, sd) | | |
|------------------------------|----------|---------------------------|------|--------------------------|------|----------------------------|------|-----|
| Gender | | | | | | | | |
| Men | 449,624 | 2.14 | 0.40 | 0.53 | 0.10 | 19.9 | 1.5 | |
| Women | 564,262 | 2.16 | 0.39 | 0.53 | 0.10 | 20.0 | 1.5 | |
| Age class at baseline | | | | | | | | |
| 40-59 | 498,365 | | 2.12 | 0.40 | 0.52 | 0.10 | 19.9 | 1.5 |

| Medium | 595,923 | 2.14 | 0.39 | 0.53 | 0.10 | 19.9 | 1.5 |
| Low | 243,582 | 2.10 | 0.40 | 0.52 | 0.10 | 19.9 | 1.6 |
| Area-based socioeconomic position | | | | | | | |
| Very high | 208,165 | 2.30 | 0.29 | 0.57 | 0.07 | 20.3 | 1.0 |
| High | 211,505 | 2.25 | 0.36 | 0.55 | 0.09 | 20.2 | 1.4 |
| Medium | 203,596 | 2.18 | 0.38 | 0.54 | 0.09 | 20.0 | 1.5 |
| Low | 200,068 | 2.03 | 0.43 | 0.50 | 0.11 | 19.7 | 1.7 |
| Very low | 189,783 | 1.98 | 0.40 | 0.49 | 0.10 | 19.5 | 1.6 |

RESULTS – Association with mortality

| | Non-accidental Mortality 80,941 deaths | | | Cardiovascular Mortality 32,460 deaths | | | Respiratory Mortality 5,282 deaths | | |
|---|--|--------------|-------------|--|--------------|-------------|--|--------------|-------------|
| | HR | 95%CI | | HR | 95%CI | | HR | 95%CI | |
| PAH (per 1.3 ng/m ³ increments) | 1.05 | 1.02 | 1.07 | 1.06 | 1.02 | 1.10 | 1.05 | 0.95 | 1.16 |
| BaP (per 0.3 ng/m ³ increments) | 1.04 | 1.02 | 1.07 | 1.05 | 1.02 | 1.09 | 1.04 | 0.95 | 1.15 |
| PM2.5 (per 5 ug/m ³ increments) | 1.04 | 1.01 | 1.07 | 1.07 | 1.03 | 1.12 | 0.99 | 0.90 | 1.09 |

Hazard Ratios adjusted for: occupation, education, marital status, area-based SEP, income, diabetes, hypertension, stratified by sex, with age as time-scale

RESULTS – Association with incidence

| | HR | 95%CI | |
|---|------|-------|------|
| ■ Incidence of lung cancer (7,585 cases) | | | |
| PAH (per 1.3 ng/m ³ increments) | 1.10 | 1.01 | 1.19 |
| BaP (per 0.3 ng/m ³ increments) | 1.09 | 1.01 | 1.18 |
| PM2.5 (per 5 ug/m ³ increments) | 1.10 | 1.02 | 1.19 |
| ■ Incidence of acute coronary event (20,730 cases) | | | |
| PAH (per 1.3 ng/m ³ increments) | 0.99 | 0.94 | 1.04 |
| BaP (per 0.3 ng/m ³ increments) | 0.99 | 0.94 | 1.03 |
| PM2.5 (per 5 ug/m ³ increments) | 0.99 | 0.94 | 1.04 |
| ■ Incidence of stroke (12,865 cases) | | | |
| PAH (per 1.3 ng/m ³ increments) | 1.07 | 1.00 | 1.13 |
| BaP (per 0.3 ng/m ³ increments) | 1.06 | 1.00 | 1.12 |
| PM2.5 (per 5 ug/m ³ increments) | 1.10 | 1.04 | 1.18 |

Hazard Ratios adjusted for: occupation, education, marital status, area-based SEP, income, diabetes, hypertension, stratified by sex, with age as time-scale

CONCLUSIONS

short-term

- There is a clear association between exposure to air pollution and natural and respiratory mortality
- Highest effect in elderly with linear concentration response functions
- No evidence of association with cardio-respiratory hospitalizations

long-term

- There is a clear association between exposure to air pollution and natural and cardiovascular mortality
- There is a clear association between exposure to air pollution and incidence of lung cancer and incidence of stroke
